

Painting a File The steps for manipulating a single layer are easy to follow. However, you might find a better way of painting on a layer, so you'll also learn about layers and masks. **1.** Open the image and select a layer that represents the background, which you'll use to paint on as a reference. **2.** Load the Create a Custom Brush dialog using the Brush panel in the tools panel. **3.** Make a brush with any large, thin brush with any texture. Otherwise, drag and drop the brush from the Brush panel to the toolbox. **4.** In the Brush dialog's Preview tab, in the sample at right, click the paint bucket and open it. Press and hold the mouse button over the brush image and drag the brush over the sample image to paint on the canvas. You can experiment with different textures and painterly effects by changing brush settings in the brush's Appearance tab. Any brush can have its settings changed to control a variety of characteristics including diameter (the size of the brush's path), hardness (how far the brush's tip is pressed into the canvas), angle (how far the brush's tip is angled from the vertical), and opacity (the amount of paint on the brush). In addition to the Painterly and Realistic modes, you can control the Brush's Effect tab to paint

Elements 11 comes with a long list of upgrades, some of which are extremely useful. Here is an overview of the features we cover in this post: New Features in Photoshop Elements 11 Paint Bucket Use the new Paint Bucket tool to quickly paint any object with a solid color. Magic Wand The Magic Wand tool in Elements 11 is very similar to the one in Photoshop CS5. It automatically selects the best possible areas of the image you want to work on. It does so by analyzing the image and identifying the most important parts. HSV and Color Picker With the new Color Picker, find out quickly the exact color of a selected or selected area of the image. New Pen Tool The Pen tool is easier to use, and you can adjust its size, shape, and color. It also has a non-destructive new option called Trim. New Optimized Lens Blur filter Elements 11 includes a new Lens Blur filter. It can be used to simulate different effects like a defocused, soft-focus, or hyperfocal blur. Expand/Contract-Layers Use this new feature to quickly change the visible size of a layer. Cut and Copy Elements 11 is much faster than earlier versions. It even allows you to cut and copy a large section of a layer. Whites and Blacks Use the new feature to quickly make white or black areas. Masking and Compositing Elements 11 includes a new masking tool to create new layers and also an Layers panel with a new masking option called "Highlight using selection." Option-R/Shift-R in the right-click menu The new Shift+right-click or Option+right-click menu now includes the same Layers panel as Photoshop. Fill-Style Brush Choose your preferred brush mode from a new settings menu. Highlight-Using-Selection The new high-light tool in Elements 11 can be used for highlighting either the pixels of an image or the pixels of another image. Saturation & Lightness Choose the colors you want to make brighter and brighter or darker and darker with this new tool. New Fill-Style Make your image appear brighter or darker. Levels Use Levels to make a color image 388ed7b0c7

Q: How to make a UISwitch position itself properly based on the view? I'm trying to position a UISwitch in a view based on the image above it, all this has to do with changing a segment in my UITableView. So I have a table view with 2 rows in it. I want to make it so that when "Categoria 1" is selected, then the UISwitch is in the position of the 2nd row and when "Categoria 2" is selected, the switch goes to the position of the 1st row. I will add 2 images to the UITableViewCells. Is it possible to do with a coding or only in the storyboard? A: If you're presenting this UISwitch in a UITableViewCell, it's pretty easy: Instead of writing switch.frame = CGRectMake(0, UISwitch.frame.size.height + UISwitch.frame.origin.y, UISwitch.frame.size.width, UISwitch.frame.size.height); just write switch.frame = CGRectMake(0, UIView.appearance.frame.size.height + UISwitch.frame.origin.y, UISwitch.frame.size.width, UISwitch.frame.size.height); This will place the switch at the same position as the UITableViewCell. You can also choose to add constraints to the UISwitch. If you do that, you can make sure the switch is as far to the top as possible. Q: How does my query timeout with an Adverb as a WHERE clause I am trying to slow down an adverb query which I am performing using the WITH clause and the ROWNUM pseudo-column. SELECT 0 AS Current, ROWNUM AS WRKID, sysdate AS DTE, enote AS ORDERDESC, 'Y' AS EPSFUN, 'Y' AS PROJSTATUS, CASE WHEN (MAX(LSEXP) > 0) THEN 'Y' ELSE 'N' END AS SOLUTION, 'Y

Introduction to Brushes Brushes can be made up of a single color or range of colors. Most brushes are created on a computer, but you can also create brushes manually using paints, markers, pens, and stamps. Brushes can also be used to create digital drawings. If you're interested in making brushes, see [www.stephentrowbridge.com/photoshop/](for a tutorial that teaches you how to make brushes. When using the Brush tool, you'll notice that you can change the size, shape, and hardness of the brush. You can also apply one of many different different strokes. You can change the Brush tool settings from the Brush Tool Options panel (View → Brush Options, or right-click while pressing the paint brush icon on the Tools panel and then selecting the Brush Options). Here are some of the most common brush tips and settings: * To add a range of colors to a brush, paint over the brush outline with an adjacent color. The first color is applied to the shape, and the second color is added to the selection. To clear the brush's selection, press the Shift+W key. * To add a line of colors, paint over the brush outline with a stroke in a color you want. To clear the brush's selection, press the Shift+W key. * To mask the brush, select the area of an image to which the brush will be applied. To clear the selection, press the Shift+W key. * To change the hardness of the brush, paint with varying degrees of pressure on the brush icon or the paint brush icon on the Tools panel. Brush Tip Settings | Brush Tip | | | |-----| |-----| |-----| | Type | Solid | Gradient | | Foreground & Background | Brush color | Brush color | | Size
